Data Visualization with Power BI and Tableau

Practical – VI

Roll No.: T043	Name: Hanoch Shetty
Class: TYIT	Batch: 1
Date of Assignment: 21/08/2026	Date/Time of Submission: 21/08/2026

a) Apply worksheet-level and workbook-level formatting

Workbook level:

Worksheet level:

Steps to Apply worksheet-level and workbook-level formatting

A. Workbook level formatting:

1. Go to format -> Workbook -> Check for various options such as Font, Lines, Color Palettes
2. Click on the down arrow to find color and font options

B. Worksheet level formatting:

1. Right Click on any text on the worksheet -> Format -> Various options appear

b) Customize number, date, and null value formatting

Step to Customize number, date, and null value formatting

- Right-click the field in the Data pane and select **Default Properties > Number Format**.
- Choose the desired format type (e.g., Number, Currency) in the dialog box.
- Adjust specific settings like decimal places, units, or add custom prefixes/suffixes.
- Click **OK** to apply your custom formatting to the selected field.

c) Design effective color schemes and layouts

d) Create informative tooltips

Steps to Design effective color schemes and layouts

- Select the **Color** mark on the Marks card to adjust color intensity or palettes.
- Use the **Dashboard** menu to select tiled or floating containers to organize your layout.
- Adjust alignment, spacing, and sizing within the Layout tab to improve visual flow.
- Ensure color contrast and layout spacing enhance readability for the end user.

Step to Create informative tooltips

- Click on the **Tooltip** button on the Marks card to open the editor.
- Use the **Insert** dropdown to add relevant fields that you want displayed.
- Customize the text, fonts, and arrangement within the dialog box to ensure clarity.
- Select **OK** to save your changes and preview the tooltip by hovering over data points.

e) Implement “Viz in Tooltip”

The screenshot shows the 'Edit Tooltip' dialog in Tableau. The 'Tableau Book' is set to '10'. The 'Insert' dropdown is open, showing options like 'Data Source Name', 'Data Update Time', 'Sheet Name', 'Workbook Name', and 'Page Count'. The 'Sheet Name' option is selected. The dialog also shows a list of fields to be included in the tooltip, such as Stadium, Shots, Successful Passes, Top Speed Km/h, Total Passes, and Yellow Cards.

Step to Implement “Viz in Tooltip”

- Create the secondary visualization sheet that you wish to appear inside the tooltip.
- Open the **Tooltip** editor on your main sheet and click the **Insert** dropdown.
- Select **Sheets** and choose the name of the secondary sheet you created.
- Adjust the width and height parameters within the tooltip code to fit the view properly.

f) Improve readability and user experience

g) Apply best practices for visual storytelling

Steps to Improve readability and user experience

- Use clear, descriptive titles for all charts and axes to provide context.
- Apply consistent font sizes and styles throughout the dashboard for a clean look.
- Simplify the view by removing unnecessary gridlines, headers, or redundant legends.
- Ensure interactivity, such as filters and tooltips, is intuitive for the user.

Step to Apply best practices for visual storytelling

- Choose appropriate chart types based on the data relationship you want to highlight.
- Use color sparingly to emphasize key data points or trends rather than for decoration.
- Structure the dashboard layout to guide the viewer's eye through the narrative flow.
- Add annotations or commentary to explain significant insights or anomalies directly.
